DETAILED ACTION

1. In view of the after Final amendment (paper #6, filed 1/26/04 has been entered) and Appeal Brief (filed on 5/4/04), PROSECUTION IS HEREBY REOPENED. A new rejection set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

(1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,

(2) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000.

Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1, 4-8, 11-17 and 24-26 are rejected under 35 U.S.C. 102(e) as being anticipated by Airey et al (6,650,327 hereinafter "Airey").

Airey teaches a method for buffering data produced by a computer graphics pipeline (Figs. 1 and 2) comprising producing graphics floating point data in a graphics pipeline (abstract); operating on the graphics floating point data in the graphics pipeline (Fig. 2); and storing the graphics floating point data in a buffer (frame buffer 140 and texture memory 507); wherein the graphics floating point data includes fragment data (col. 7, lines 17-28) received from a rasterizer (138) that is read and stored in an unclamped format (col. 7, lines 57-63, col. 8, lines 1-14 and col. 9, lines 9-23) dictated by a graphics application program interface (col. 6, lines 31-40) for increasing a parameter selected from the group consisting of a precision and a range of the graphics floating point data (abstract, col. 4, lines 33-37, col. 7, line 29 to col. 10, line 25). Therefore, at least claims 1, 4-8, 11-17 and 25-26 are anticipated by Airey.

Claim 24 is similar in scope to claim 1, and additionally requires to determine whether the graphics pipeline is operating in a programmable mode or not (Fig. 2, graphics program 130; col. 6, lines 31-48).

Response to Arguments

4. Applicant's arguments with respect to claims 1, 4-8, 11-17 and 24-26 have been considered but are moot in view of the new ground(s) of rejection.
